

State of Louisiana

Louisiana Department of Health Office of Public Health

June 30, 2016

To all interested parties:

The attached list is a compilation of all Louisiana public water systems (PWS), which had violations of drinking water regulations in 2015. They are listed by parish and include the public water system identification (PWS ID), name of the supply, a description of the type of violation and the date of violation and are separated into community systems which serve homes and non-community systems which provide water to stores, schools, factories, rest areas, etc. A public water supply is one that serves 25 or more people or has 15 or more service connections for 60 or more days per year. There were 1,386 regulated water systems during 2015, of which 1,017 were community and 3,69 were non-community water systems. In 2015, 697 water systems (community [C] - 560 & non-community [N] - 137) had 3,604 total violations (C-3,141 & N-463). These violations fall into three major categories:

- a) Maximum Contaminant Level violation - Under the Safe Drinking Water Act (SDWA), the Environmental Protection Agency (EPA) sets national limits on contaminant levels in drinking water to ensure that the water is safe for human consumption. These limits are known as Maximum Contaminant Levels (MCLs).
- b) Treatment Technique violation - For some regulations, the EPA establishes treatment techniques in lieu of an MCL to control unacceptable levels of certain contaminants. For example, treatment techniques have been established for viruses, bacteria, turbidity and lead.
- c) Monitoring & Reporting violations - A PWS is required to monitor and verify that the levels of contaminants present in the water do not exceed the MCL on a regular schedule. If a sample is not collected and analyzed, a monitoring violation occurs. A reporting violation also includes failure to report test results correctly to the state or to notify water system customers of a violation in a timely or appropriate manner.

A separate table summarizing the 2015 violations in these three categories is included with this report; however this table only shows those federal violations considered "major" within the three categories, thus the violation counts may not agree with the list totals discussed in this report which includes all federal and state violations for 2015.

In 2015, five percent of the violations (C-73 & N-14) and 13% of the systems with violations (C-62 & N-11) were bacteriological MCL violations. Community and large non-community systems are required to be tested for coliform bacteria every month and small non-community systems are checked every three months. Although coliform bacteria are found throughout the environment and can enter water by various mechanisms, they are primarily associated with sewage and the intestinal tract of mammals and are used as an indicator of potential health-related contamination of drinking water. If the presence of coliform is confirmed, the system is in violation and is required to notify its customers of the problem(s). These are listed in the report as "MCL (TCR), MONTHLY - COLIFORM (TCR)". If a special kind of coliform bacteria, which is more directly related to warm blooded animals, is found

the report indicates this as “MCL (TCR), ACUTE - COLIFORM (TCR)”. Since these acute violations are of much greater health concern, the manner and speed in which customers are notified is greatly enhanced. Louisiana had only three acute TCR violations (C-2 & N-1) with three systems in violation (C-2 & N-1). Excluding the acute violations, the notification of customers always comes after the violation occurred. The intent of the notice is to inform the customers of the potential health risk and to motivate the water systems to undertake actions that will prevent a reoccurrence of the problem.

In Louisiana the responsibility for collecting bacteriological samples lies with the individual water system. If the required number of samples is not collected, sampling violations occur and the system must notify their customers. Louisiana’s public water systems had initial (“ROUTINE”) and follow-up (“REPEAT”) bacteriological sampling violations in 2015. Initial refers to the first round of sampling and follow-up refers any subsequent confirmation sampling. The report lists 221 “MONITORING (TCR), ROUTINE MAJOR” violations (C-136 & N-85) with 122 systems in violation (C-71 & N-51), and eight “MONITORING (TCR), REPEAT MAJOR” violations (C-8 & N-0) with eight systems in violation (C-8 & N-0). Major refers to a failure to collect any samples. There were also a few minor bacteriological monitoring violations.

Additionally, public water systems that utilize groundwater as their source are required to monitor their source water (wells) for bacteriological contaminants if coliform bacteria are found during routine bacteriological sampling. Eighteen water systems (C-13 & N-5) with a combined 31 violations (C-22 & N-9) failed to complete this monitoring.

Violations containing the terms “SWTR”, “TURBIDITY” or “IESWTR” are from public water systems that utilize surface water (lakes, rivers and streams) as their source that were not able to produce water with a low enough turbidity or did not monitor turbidity frequently enough. Turbidity is the measure of the amount of suspended material (cloudiness) in the water. During the report year there were 57 regulated surface water systems in Louisiana, and one monitoring violation (C-1 & N-0) occurred with one system in violation (C-1 & N-0), and five treatment technique violations (C-3 & N-2) occurred with four systems in violation (C-2 & N-2). These violations normally occur in the winter and are associated with the increased difficulty of treating surface waters during colder months. This notification also comes after the violation.

In Louisiana, most of the chemical sampling (excluding lead & copper, disinfectants and disinfection-by-products) is done by Office of Public Health staff. Samples to check for numerous inorganic, organic and radiological compounds are routinely collected and analyzed. If levels of these are above a safe level, an MCL violation is issued or if samples are not collected in a timely manner, a monitoring violation is issued. There were 15 chemical MCL violations issued for arsenic (C-13 & N-2) with five systems in violation (C-4 & N-1). Arsenic is a metal found in some ground water.

Public water systems are required to maintain an adequate level of disinfectant “CHLORINE RESIDUAL” in their water system to kill disease-causing microorganisms and are issued violations if they fail to maintain a protective level. In 2015, there were 206 inadequate chlorine residual violations (C-153 & N-53) with 101 systems in violation (C-67 & N-34).

Public water systems are also required to test their water for disinfection by-products and surface water systems are additionally required to test for disinfectant by-product precursors. Total Trihalomethanes (TTHMs), Total Haloacetic Acids (HAA5) and Chlorite are all disinfection by-products (DBPs) formed by disinfectants used to treat drinking water. Prior to 2004, only large systems

were required to monitor for TTHMs but per the Stage 1 and Stage 2 Disinfectants and Disinfection By-products Rules (DBPR) all community and non-transient non-community water systems are required to monitor TTHMs, HAA5 and Chlorite (if chlorine dioxide is used). For Stage 1 DBPR, there were three violations (C-3 & N-0) of the MCL (Average) for chlorite with one system in violation (C-1 & N-0). Also, there were 20 violations (C-20 & N-0) for inadequate disinfection by-product precursor removal with seven systems in violation (C-7 & N-0). For Stage 2 DBPR, there were 416 violations (C-396 & N-20) of the MCL (LRAA) for TTHMs with 93 systems in violation (C-88 & N-5), and 78 violations (C-78 & N-0) of the MCL (LRAA) for HAA5 with 26 systems in violation (C-26 & N-0). Violations were issued for systems failing to monitor for TTHMs-HAA5 (245 violations [C-219 & N-26] with 205 systems in violation [C-182 & N-23]).

This report is an effort by the EPA and the Louisiana Office of Public Health to provide the general public with additional information regarding the quality of their drinking water. This report is a follow-up to earlier reports dating back to 1996. The complete implementation of the Stage 2 DBPR in 2015 contributed to an increase in TTHMs-HAA5 MCL violations. Also, public water systems are challenged with meeting the tighter requirements of the new Disinfection By-products Rule (Stage 2) while maintaining adequate disinfectant residual in the water system to control the amoeba, *Naegleria fowleri*, which has been detected so far in seven public water systems in Louisiana. A report on the violations for 2016 will be issued in the summer of 2017. Additionally, each water system produces an annual Consumer Confidence Reports which provides detailed information about chemical sampling results and drinking water violations. This and other information drinking water information is available on EPA's internet site and will be available on the health department's internet site. A summary form developed by EPA with violation total and definitions is available upon request.

If you have any additional questions, please feel free to call or write.

Caryn Benjamin, Deputy Chief Engineer – Compliance and Enforcement
