FISH CONSUMPTION ADVISORY FOR CLEAR LAKE (LAKE EDWARDS)

In response to recent sampling and analysis of fish tissue data, the Louisiana Department of Health & Hospitals (DHH), Department of Environmental Quality (DEQ), and Department of Wildlife & Fisheries (DWF) are issuing the following advisory for Clear Lake (Lake Edwards) in DeSoto Parish where unacceptable levels of mercury have been detected in bigmouth buffalo, black crappie, bowfin (choupique, grinnel) and largemouth bass.

DHH, DEQ and DWF advise that the following precautions be taken when eating fish taken from Clear Lake (Lake Edwards):

- **Women of childbearing age and children less than seven years of age should consume no more than ONE MEAL PER MONTH of black crappie, bowfin (choupique, grinnel), largemouth bass, or bigmouth buffalo combined, from the advisory area. (A meal considered to be half a pound of fish for adults and children.)**

Louisiana fish consumption advisories are based on the estimate that the average Louisiana resident eats four fish meals per month (1 meal = ½ pound). Adults that eat more than four meals of fish a month, and women of child-bearing age and children that eat more than one meal of fish a month from local waterbodies, might increase their health risks. You can contact the Office of Public Health toll free at 1-888-293-7020 for more information about eating fish that contain chemicals.
